**SEATEK PARTENERED WITH TEXA FOR DIAGNOSTICS  
ON ITS HIGH-PERFORMANCE MARINE ENGINES**

**A new and prestigious partnership has been established, this time with a historic brand in the field of engines for major offshore racing competitions.**

**Seatek**, founded in 1986 and now a leading brand in the world of high-performance marine engines, **has chosen TEXA as its official diagnostic supplier**. This marks a new and significant collaboration, following existing official supply agreements with other prestigious brands such as **Dumarey, Selva Marine**, and **Tohatsu Italia**, further confirming the effectiveness of TEXA's multi-brand solutions dedicated to the boating industry, an area in which TEXA has been active since 2010. Seatek engines have participated in the most important international competitions, winning, among others, the "Miami-Nassau-Miami," the "Venezia-Montecarlo" and the "Miami-New York" races.

As part of the agreement, TEXA will provide Seatek's sales network in Italy and worldwide with its **IDC6 MARINE** diagnostic software and the **NAVIGATOR TXB 2** interface. Additionally, a specific diagnostic protocol will be developed for **Seatek's new 10.2-liter, 6-cylinder 900 CR engine**. The diagnostic solution for this innovative engine will be included in the IDC6 MARINE software, which will be released in March and will be available to all TEXA customers.

"We are very pleased with the partnership with Seatek," commented **Mario Giacomella, Product Manager for Bike and Marine at TEXA**. "This collaboration allows us to further expand our commitment to the marine industry by once again providing advanced technological solutions. The integration of TEXA's expertise with Seatek's excellence ensures that customers will have even more high-performance and reliable products in a dynamic and ever-evolving market. We share a vision focused on quality and innovation, fundamental values that will guide our common journey into the future."

"We are thrilled to embark on this new and exciting collaboration with TEXA," explained Engineer **Giovanni Franco Zanoni, CEO of Seatek S.p.A.** "At Seatek, we are convinced that integrating our skills and resources with TEXA's technological innovation represents a unique opportunity to offer even more high-performance and advanced solutions to our customers. This partnership, based on shared values such as quality and innovation, will certainly be a key factor in addressing the challenges of a constantly evolving market. We are confident that this synergy will bring numerous benefits and advantages, helping to solidify our position as a leader in the marine sector."
